Long before the majestic silhouette of Big Ben graced the skyline, the area now known as Westminster was a bustling hub of political and religious power. The Palace of Westminster, the precursor to the present Houses of Parliament, held court in this area for centuries. The development of this area, and ultimately the construction of the clock tower, rests upon a deep understanding of London's historic core. This chapter delves into the medieval landscape, charting the growth of Westminster Abbey and the Palace, laying the groundwork for the future construction of Big Ben. We will explore the physical geography that influenced its development, the key historical figures who shaped its destiny, and the foundational events that set the scene for the architectural masterpiece to come.
